Background

This report builds on previous reports by The Mckell Institute on penalty rates and industrial relations, including:

- *Who loses when penalty rates are cut?* (2015)
- *The economic impact of penalty rate cuts on rural NSW* (2015)
- *The economic impact of penalty rate cuts on metropolitan Brisbane* (2015)
- *The importance of penalty rates for our health workforce* (2016)
- *The impact of the FWC's February 23 Sunday Penalty Rates Decision* (2017)

Further Mckell Institute research into penalty rates and industrial relations can be found at

www.mckellinstitute.org.au/policy-areas/industrial-relations/

Authors

- Esther Rajadurai is a policy officer at The Mckell Institute, focusing on economic and quantitative analysis.

Introduction

The decision by the Fair Work Commission to reduce the Sunday rates of pay for workers in the hospitality, retail, pharmacy and fast-food sectors will result in declines in disposable incomes in urban electorates across the nation, with a significant impact on electorates in which a large proportion of the workforce are workers in the retail and hospitality industries.

The proposed changes will see some employees losing close to \$100 a week, with certain individuals working fulltime including an 8-hour Sunday Shift losing between 4.3%-8.1% in annual wages.

This report looks specifically at the impacts of the cut in Sunday rates to workers in urban electorates across Australia. It finds that at least 355,337 workers within Urban electorates are currently working on awards subject to change, and estimates that workers within the affected group could collectively lose in total over \$760 million in income per year.

This report only models the direct impact on workers' income cut in the penalty rates will produce. This report does not model the broader impact on urban economies that the loss in disposable income will have, such as a decline in consumption within the electorates analysed. While this modelling is not included in this report, it should be noted that the loss in disposable income for affected workers will likely create downward pressure on job creation within sectors reliant on discretionary expenditure, such as retail and hospitality, countering the assumptions by proponents of a reduction in the take home pay of workers will result in job creation.

Changes in the take-home pay of affected workers are particularly severe considering the changes affect a group within the labour market that already receives among the lowest remuneration in the Australian labour market.

The findings in this report demonstrate the significant role penalty rates play in the Australian economy, and to the livelihoods of employees in the industries affected and their local economies.

Key Findings

1. Workers in urban electorates will lose \$760 million in disposable income per year in total.

The report calculates, that across the urban electorates of Australia, the economies stand to lose over \$760 million dollars in disposable income annually as a result of the Fair Work Commission's February 23 decision to reduce Sunday rates of pay. Additionally, although unaccounted for in the report, the local communities in these electorates will also lose money as a result of the reduced income of its local workers.

2. The local economies of Lalor and Holt in Victoria will be hit the hardest by the changes in the Retail Sector.

In calculating the losses in income for the employees in the retail sector, the federal state of Lalor will be affected the most by this decision with 1600 workers standing to lose over \$5,238,767 in disposable income annually. This is followed closely by Holt in Victoria employing over 1491 award reliant workers and losing \$4,882,606 in disposable income annually.

3. The electorates of Sydney, NSW and Moncrieff, Queensland, will stand to lose the largest in terms of the Hospitality Sector.

The hospitality industry will also be adversely impacted with Sydney bearing the largest burden of the cut in the Sunday penalty rates as it employs over 3333 award reliant workers in this industry and stands to lose over \$4,969,359 in disposable income annually. Moncrieff in Queensland will be the next largest electorate to be impacted by the FWC's decision as it employs 3117 workers and will see \$4,647,382 in disposable income leaving its community.

4. In calculating the total changes in disposable incomes across all electorates, in all four industries, New South Wales stands to lose the largest followed closely by Victoria.

Join us in setting the public policy agenda

The FWC's decision can be seen to be having wide ranging negative impacts on electorates across Australia with New South Wales standing to lose the most from this decision as it will see over \$231,361,361 in disposable income leaving its electorate annually. Victoria will follow closely with \$213,549,009 in income being lost from its communities' state wide.

Assumptions and Methodology

Data Sources

The data for the calculations were obtained from the ABS Census of Population and Housing 2011 – in particular the workforce data specific to industry, Federal Electorate of residence and income. Electorate based data were acquired from the Community Profiles made available by the ABS.

The number of workers for 'Retail' and 'Hospitality' were assumed to be all workers from 'Retail Trade' and 'Accommodation and Food Services'. The total number of workers for the Pharmacy and Fast Food Industries were obtained from the Australian Council of Trade Unions (ACTU). Additionally, the percentage of award reliant workers for each industry were also obtained from the ACTU.

The study has been conducted using Federal electorates as its geographic unit and includes all the urban electorates as classified by the Australian Electoral Commission. It therefore does not include electorates in the entirety of the Northern Territory or Tasmania, which are classified as rural and regional.

The number of workers employed in each industry are award-reliant workers for each sector. The wage rates for Sunday have been taken from the FWC's current awards and minimum wage rates for each industry 2017 and thus depict yet again, a conservative estimate.

Methodology

For Retail and Hospitality:

1. Use 2011 census to obtain retail and hospitality worker numbers in each Federal Electorate.
2. Apply estimate of the number of workers who *actually work* weekends.

3. Apply the reduction in Sunday Penalty Rates and assume 19% Marginal Tax rate to estimate disposable income lost per worker.
4. Use the total number of workers in each industry to estimate total disposable income lost annually.

For Pharmacy and Fast Food:

1. Use total number of Australians working in these 2 industries from the ACTU. Assume that 75% of these workers belong to urban electorates due to this assumption holding true for the Retail Industry.
2. Derive proportional estimates of the number of for each electorate based on the proportions obtained for the retail and hospitality industry from the ABS census.
3. Apply the reduction in Sunday Penalty Rates and assume 19% Marginal Tax rate to estimate disposable income lost per worker.
4. Use the total number of workers in each industry to estimate total disposable income lost annually.

Assumptions

1. A marginal tax rate of 19 percent has been used to estimate the average loss in disposable income per worker. This figure is used given that the average income per worker in each sector usually falls in the \$18,201-\$37,000 tax bracket.
2. The assumption that 75% of total workers in the Pharmacy and Fast Food Industry work in urban electorates is a conservative estimate given that the official figures obtained from the ABS Census of Population and Housing 2011 accounts for close to 85% of workers coming from urban electorates for the Retail Industry.

3. All figures are conservative (minimum) estimates. This is critical given that the cut in penalty rates for public holidays is not considered in the calculations.
4. Note that all figures have been rounded to 0 decimal places and/or the nearest dollar. This may result in certain totals being rounded up and differ minutely from manual calculations.
5. Proportion of workers who *actually* work weekendsⁱ: :
 - Retail: 46.4%
 - Hospitality: 61%.
 - Pharmacy: 42.1%
 - Fast Food: 59.9%
6. Percentage of *award reliant* workers for each industryⁱⁱ:
 - Retail: 31%
 - Hospitality: 60%.
 - Pharmacy: 65%
 - Fast Food: 50%

Conclusion

This report has sought to identify the significant impact of the cut in Sunday Penalty rates to the incomes of affected workers, and the aggregate loss of income within urban electorates across Australia. The adverse impact on the retail, hospitality, pharmacy and fast food industries, will produce negative externalities across the selected electorates, since these affected industries employ a sizeable proportion of the workforce.

The calculations presented in the tables above have identified a total loss of over \$760 million in disposable income per year, which is a conservative estimate, given that the numbers do not take into account the cuts in rates on public holidays and the growth in the population and workforce of these industries since 2011, when the last thorough Australian census data was collected, generating an accurate community-by-community snapshot of the labour market.

The reduction in wages for the affected employees is highly significant and will lead to declines in living standards for the individuals affected, as well as stunted growth across the electorates as local businesses reliant on discretionary expenditure face the challenges associated with engaging a customer base with less discretionary income.

Additionally, while the workers on Enterprise Bargain Agreements will not be directly impacted immediately by the proposed changes, these members of the workforce may face future reductions in take home pay should the FWC decision relating to award-reliant workers be used as a basis for industries to negotiate future agreements with employee representatives.
